

Clean Seed Capital Joins Global Climate Action Dialogue at COP30 in Brazil

November 12th, 2025 – Vancouver, British Columbia – Clean Seed Capital Group Ltd. (“Clean Seed” or the “Company”) (NEX: CSX.H) is proud to announce its participation at the United Nations Climate Change Conference (COP30), held in Belém, Brazil. Clean Seed joins a contingent of Canadian and International stakeholders participating at COP30, aligning with Canada’s leadership in sustainable agriculture and global technology transfer. In addition, through joining the **Global Alliance for Sustainable Productivity (GASP) delegation**, Clean Seed will contribute to high-level discussions around food systems transformation and regenerative productivity.

COP30 is expected to bring together **over 60,000 delegates from 197 countries**, including world leaders, ministers, global financial institutions, and NGOs for one of the most critical climate summits to date. Hosted by the Parties to the United Nations Framework Convention on Climate Change, COP30 will focus on operationalizing sustainability transitions across major emitting sectors, including food systems and agricultural productivity.

Clean Seed has also been invited to participate in key GASP panel and discussion sessions with additional details on panel participation to follow.

Built for Global Impact - Ready for Global Deployment

Clean Seed’s SMART Seeder™ Mini-MAX™ is a compact, digitally enabled precision seeding platform that has been **industrialized and manufactured by Mahindra & Mahindra Ltd.**, the world’s largest tractor manufacturer by volume. Mahindra is manufacturing the Mini-MAX™ for both Clean Seed, and its own distribution under a technology license agreement. This relationship underscores the platform’s technical reliability, performance and manufacturing support.

At COP30, Clean Seed will emphasize the importance of deploying proven, scalable solutions that reduce environmental pressure while increasing food system resilience — particularly in regions with high climate vulnerability and low mechanization. The Mini-MAX™ is purpose-built to address this gap, designed to **reduce fertilizer use, reduce fuel consumption and enhance yields** as a true no-till seeder. The Mini-MAX can provide farmers with financial and environmental improvements to operating performance on a sustainable basis.

Our singulation-capable Mini-MAX™ recently made its regional debut in Mexico reinforcing Clean Seed’s commitment to expanding access to practical, precision-driven sustainability.

A Scalable Answer to a Global Challenge

Clean Seed's Mini-MAX™ directly addresses many of the top challenges being prioritized at COP30: reducing emissions, restoring soils, conserving water, improving yields, eliminating destructive practices for in-field stubble and enabling climate-resilient food systems. Not only does the Mini-MAX™ provide solutions to these challenges, it does so in a compact platform designed specifically for underserved smallholder producers.

Graeme Lempriere, Chairman & CEO, Clean Seed Capital, state:

"We are honored to participate in COP30 and join a global dialogue on deploying practical, scalable solutions that benefit both the environment and farm economics. Our SMART Seeder™ Mini-MAX™ has moved into full production. Our validated, commercially ready platform is now delivering real impact. We look forward to exploring new partnerships at this event that accelerate adoption of sustainable agriculture practices worldwide."

ON BEHALF OF THE BOARD

"Graeme Lempriere"

Chairman and CEO

About Clean Seed Capital Group Ltd.

Clean Seed is an agricultural technology company accelerating the commercialization of its award-winning, internationally patented SMART Seeder™ technologies. Designed for real-world conditions these tools significantly reduce fertilizer usage while supporting higher crop performance and overall farm profitability.

At the heart of Clean Seed's offering is the SMART Seeder™ system—a breakthrough in precision seeding that combines advanced electronic metering with intuitive software control. Its ability to deliver row-by-row variable rate inputs positions it as a leading innovation in the next generation of sustainable farming.
